Street Repairs

- A Guide to Potholes & Pavement Failure
- Pavement Condition Index (PCI)
- Different Types of Repairs & Costs
- Criteria Used to Determine Scheduling of Repairs

A Guide to Potholes & Pavement Failure

How a Pothole is Created

- Report potholes (or any non-emergency maintenance problem) at the City's new SeeClickFix feature online or from your mobile device.

SeeClickFix.com/Vallejo

The screenshot shows the SeeClickFix website interface for Vallejo, CA. At the top, there are navigation links for 'Tools for Government', 'Login', and 'Sign Up'. Below the site name, there are buttons for 'Follow this Place' and 'Report an Issue'. A blue navigation bar contains 'ISSUES', 'ANSWERS', 'NEIGHBORS', and 'WATCH AREAS'. A search bar is located above the 'ISSUES' section. The main content area displays a list of issues, with the top one being 'Potholes all over' (Acknowledged) with 2 votes. The issue description states: 'There are so many potholes on both sides of the street that there is no way to dodge them. People try anyway, making for lots of swerving around. Unsafe and knocking vehicles out of alignment.' It was reported on 2013-11-14 by an anonymous user. The issue was acknowledged by the City of Vallejo Maintenance Division, assigned to Sean S., Street Section. A second issue, 'Pothole' (Acknowledged) with 5 votes, is also visible. To the right, a map shows the location of the issue on Tennessee St, with a callout 'Potholes all over'. The right sidebar contains sections for 'TOP USERS', 'WHO'S WATCHING', and 'POPULAR QUESTIONS'.

Be sure to check out the new online/mobile reporting tool!

Vallejo Street Stats

PCI (pavement condition index) is a numerical index used to indicate general condition of pavement on a scale from 100-0

Street Type

- Arterials
- Collectors
- Residential

Street type becomes very important when we talk about funding...

Three year running average PCI = 51

A 51 is considered "At Risk" for imminent failure

Cat I PCI 70-100

Streets in excellent, very good, and good condition in the Crest.

Cat I PCI 70-100

Cat II - III PCI 50-69

Streets in fair condition or "at risk" in green.

Cat I PCI 70-100

Cat II - III PCI 50-69

Cat IV PCI 25-49

Tan indicates poor condition.

Cat I PCI 70-100

Cat IV PCI 25-49

Cat II - III PCI 50-69

Cat V PCI 0-24

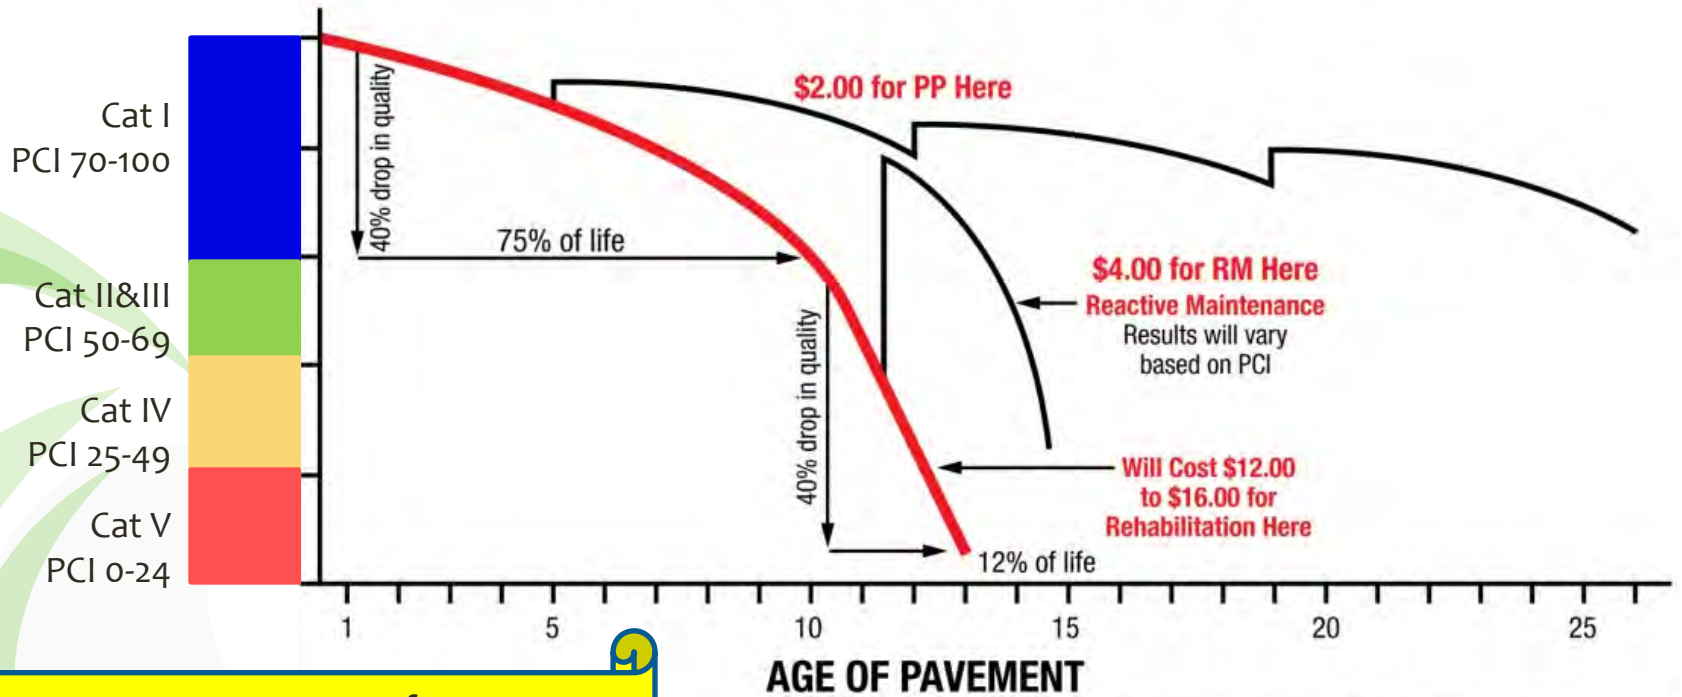

And red implies failed condition.

So, what does this mean...?

Repairs and Costs

PAVEMENT CONDITION INDEX

PP = Pavement Preservation RM = Reactive Maintenance

\$1M can pay for
40 blocks of pavement
preservation ~OR~
3 blocks of rehabilitation

Repairs and Costs

- Five year expenditure predictions
 - \$2.7M/yr => PCI decrease by 6 points
 - \$7M/yr => maintain PCI
 - \$16M/yr => PCI increase by 5 points
- Budget this year:
 - \$4.4M from Measure B
 - \$1.3M from Prop 42
 - \$1.8M from Gas Tax

Different Types of Repair

- Pothole Repair
 - Road crews fill pothole with replacement pavement material
 - Cold patches for small potholes in areas of light traffic
 - Hot asphalt in high traffic areas or larger potholes
 - Completed by City Maintenance Crews
 - Completed as quickly as possible, considering:
 - Severity (emergency fix?)
 - Number of requests
 - Other Maintenance work
 - Goal: Minimize damage until permanent pavement repairs can be made.

Different Types of Repairs

The City recently slurry sealed **19 miles** of streets, at less than \$1/sf

- Category I - Crack Seal/Slurry Seal

This will extend these roads 5-7 years

Different Types of Repairs

- Category I: Crack Seal/Surry Seal
- Category II&III: Thin AC Overlay/Skin Patch

Different Types of Repairs

- Category I: Crack Seal/Slurry Seal
- Category II&III: Thin AC Overlay/Skin Patch
- Category IV: Thick AC Overlay

Different Types of Repairs

- Category I: Crack Seal/Slurry Seal
- Category II&III: Thin AC Overlay/Skin Patch
- Category IV: Thick AC Overlay
- Category V: Reconstruction

Pavement Repair Prioritization

- Confirm current funding levels and requirements/restrictions on grants or funding source
- Evaluate the PCI, traffic volume, bus routes, and the surrounding area (school zones, retail centers)
- Coordinate with underground utility work
- Move the money around entire City
- *List of street conditions and appropriate repairs is continually updated*

Funding Restrictions

- Location

- Federal funds can only be used on streets that are identified as arterials and major collectors. (red, green, and purple lines)

~ AND ~

- New restrictions based on “Priority Development Areas” (Downtown area)

The only PDA in Vallejo.

- Use

- Specific purposes (increased transit, pedestrian, bicycling & trails, school access, etc.)

Planned work:

- 2014 Construction

- Sereno Drive (Tuolumne to Fairgrounds)
- Downtown Streetscape – Sacramento and Georgia
- Chase Street (Benicia Rd to Beach St)
- Santa Clara (Carolina to Tennessee)
- Dartmouth (Princeton to Baylor)
- Whitesides (S Regatta to end)
- Ohio (RR tracks to Broadway)
- Fleming (Mariposa to end)
- Lynn (Parkwood to end)
- Rae (Parkwood to end)
- Patrick (Parkwood to end)
- Sherrod (Parkwood to end)
- Toyon (Redwood to Tuolumne)
- Sandpiper (Mini to Meadows)
- Granville (Maple to Webb)
- Sheridan (Cherry to Magazine)
- Shasta (Nebraska to Tennessee)
- Colt (Winchester to end)
- Henry (Hale to Lassen)
- Wolfe (Springs to Florida)

Planned work:

- 2015 Construction
 - Downtown Streetscape – Maine (Sacramento to Santa Clara)
 - Florida (Tuolumne to Amador)
 - Capitol (Santa Clara to Marin)
 - Carolina (Santa Clara to Sonoma)
 - Plus all of the streets completed by Maintenance, similar to 2014's list
